

High-Performance Document Scanner

Standard ADF Function

The Automatic Document Feeder (ADF) saves users from the monotonous task of hand-feeding documents manually and allows for the scanning of large volumes of documents at high speed for increase productivity.

Straight Paper Path

Offers outstanding paper handling (From thin tracing papers to thick cardboards) by allowing the paper to travel in a nearly straight feeding route when using ADF. This results in a shorter paper path that eliminates paper jams.

No more conventional U-shaped path that jams thick brochures and slows down operations significantly when scanning double-sides.

PaperStream IP and Paper-Stream Capture Software

Delivers best possible image quality for almost any document types and characteristics. Additional features are patch and barcode recognition which allows users to prepare and organize batches for faster electronic filing.

Simultaneous Duplex Scanning

Equipped with dual-system independent CCD sensor and internal processing circuit that are capable of capturing both sides of a document with a one-time feeding to save valuable time and enhance maximum operation efficiency.
